

HatchTech Project Process

5 steps to Superior Project Quality

The key to achieving superior project quality is to ensure that both parties are aware of the so-called HatchTech Project Process. The HatchTech Project Process includes 5 steps in order to convert customer needs into a perfect running hatchery which is delivering superior chick quality.

In order to get a clear view of the requirements of the project, HatchTech works with a Questionnaire. Based on your information a Hatchery Calendar will be made by HatchTech. The Hatchery Calendar is a tool to make a forecast of your future production. As soon as everyone agrees with the Hatchery Calendar, an initial design lay-out will be made.

Based on the agreed design lay-out, HatchTech will make tailor-made calculations for your project. As a result of these calculations the commercial design lay-outs will be made, the basis for the project proposal. In the project proposal you will be able to find all technical specifications of each product in the proposal.

Once everyone agrees on the project proposal, a Sales Contract will be made between you and HatchTech. After signing and having received your first down payment, HatchTech will start Project Engineering and the production of the goods. HatchTech uses HatchTech Information Center (HIC) to distribute information about your project.

HatchTech will start engineering the necessary additional materials based on the construction drawings of the local building company. HatchTech will quote them in a separate quotation. You can either decide to source these materials locally according to the detailed drawings of engineering, or source them with HatchTech.

A team of HatchTech's- and local specialist will build the machines as agreed in the contract. During the entire installation, a HatchTech specialist will be at your site to make sure that the construction runs perfectly to assure chick quality after commissioning. When the construction of our products has been finished, our specialist will commission the hatchery together with your local specialist. After commissioning, the project will be ready to produce superior chicks!

HatchTech's state-of-the-art technology delivers the ideal environmental conditions necessary for chicks to reach their maximum potential. In order to guarantee consistently superior performance and results, proper use and maintenance is essential. HatchTech offers a range of support; training and coaching services that help ensure you get the very best out of your systems throughout their lifetime – and the best return on your investment. Together we will make a great success of your hatchery!
